

PRODUCT DATA SHEET

ELECTRIC PARKING BRAKE SWITCH

PRODUCT DESCRIPTION

The Electric Parking Brake Switch is an electromechanical component that allows easy control of the parking brake. Designed for reliability and user-friendliness, it enables quick activation or deactivation of the brake system. Some of our references has integrated AUTO HOLD button keeps the vehicle stationary after releasing the brake pedal, preventing unwanted movement (ideal for heavy traffic), long stoplights, or inclines. It automatically disengages when the accelerator is pressed, ensuring a smooth start, and also offers a manual deactivation option.

MAIN FEATURES

Efficient Control that allows the driver to easily activate and deactivate the parking brake with a single button press. **Integrated Design** to provide a sleek and ergonomic appearance for the vehicle's interior. **Durability** made from high-quality materials to ensure exceptional performance and reliability. **User-Friendly Interface** in an intuitive button design for effortless operation. **Enhances vehicle safety** by providing reliable control over the parking brake system.

PHYSICAL PROPERTIES

HOUSING	COLOUR
Plastic	Black, black/silver or beige
VOLTAGE	DIMENSIONS
12V	50 - 100 mm

PACKAGING INFORMATION

BOX DIMENSIONS	WEIGHT
180/110 x 80 x 80 mm	90-120 g
